

AGENTIC AI

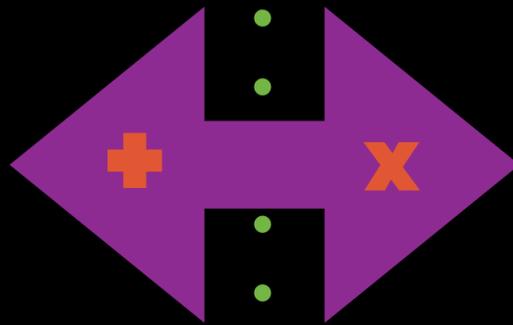

SPEAKING FRANKLY

Can Be Successful

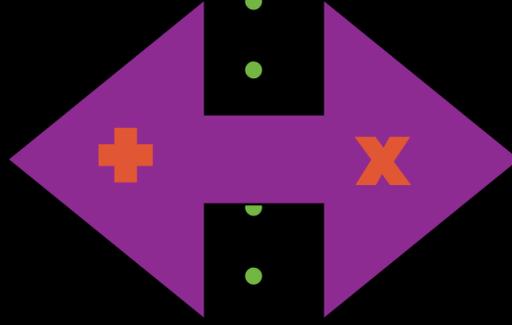

Can't Be Successful

The problems given to it are relatively simple and common.

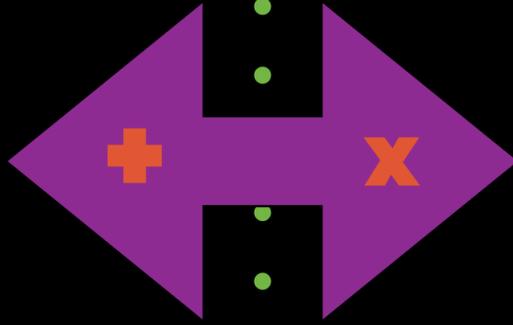

Multiple dependent queries or updates are involved.

The information received is unambiguous and does not need clarification.

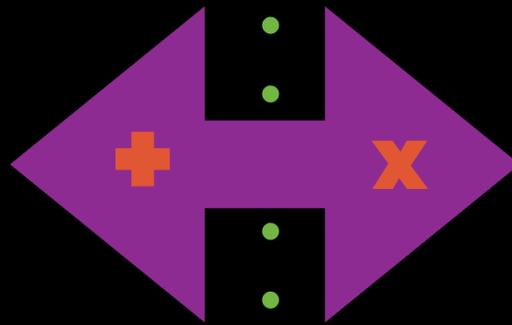

Multiple sources are required to be queried simultaneously.

Prompting is generalized, templated, and doesn't need to be flexible.

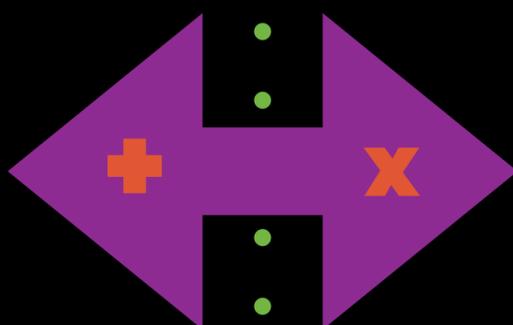

Interactions need to be monitored for traceability in complex problem solving scenarios

The originator does not need to be queried multiple times for additional information

Multiple dependent queries or updates are involved.

Problems can be solved based on semantic relationships rather than logic.

There is dynamic prompting tailored for specific query with larger context
